

Editor's Comment:

I write with respect of the manuscript with manuscript number: Ms_JGEESI_50545, entitled: Geophysical Consequences of Tropospheric Particulate Heating: Yet Further Evidence that Global Warming is Caused by Particulate Pollution, Not Carbon Dioxide.

I must comment the effort of the authors and reviewers. As pointed out by most of the reviewers there are several discrepancies with this manuscript; containing numerous unguided and unethical statements. Even from the authors point of view, CO₂ cannot be expunged as a major cause of global warming but I would also agree that particulate pollution also cause global warming and should be given the appropriate attention as well.

Hence, the title could be better as: Geophysical Consequences of Tropospheric Particulate Heating: Further Evidence that Particulate Pollution also Cause Global Warming. Please, I kindly advise also that the authors should revisit such unguided and unethical statements.
