

**Editor's Comment:**

This manuscript is very poorly written. Just look at the abstract and you will have an idea of its English, see the spellings of screening and microcidal; ethanolic and aqueous "extract" (it should be "extracts"). The manuscript is full of this type of mistakes. In the methods, I could not see where the authors have described the extraction in water. This plant is well investigated. I could not see any novelty in this work. Preliminary phytochemical screening of a well-investigated plant has little sense.

The review track shows that the authors did not properly respond to some very crucial comments related to methods and language.

I recommend that this manuscript should not be accepted in its present form.
