

Editor's Comment:

in the manuscript 2018/AFSJ/45733, I have found mistakes forgotten by the authors like in Table 5a and 5b: B-carotene instead of β -carotene. I have also asked the authors to check all their results but there are still some mistakes for example in table 4B the mineral composition (Mg) of *Parkia clappatonia* can't be 0.21 ± 0.34 and In table 5a for *Ficus elsticoides*, the vitamine E value can not be 0.11 ± 0.91 . The same for *Uvaria chemea*.

The manuscript still needs revision and needs to be improved, it is not yet suitable for publication in Asian Food Science Journal.

Author's feedback:

Beta carotene has been rewritten thank you for the observation.

The data here are the triplicate determination of a laboratory analysis which cannot be falsify. The standard deviation shows us how the three mean deviated from itself. This means the wider the mean the higher the standard deviation and vice versa. It has been cross checked and corrected.
