**PART 1: Review Comments**

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<b>Compulsory</b> REVISION comments	The article is very interesting and the idea is fantastic. <b>The inclusion fish in diets for human is very interesting especially for its biological value. Therefore:</b> what nutritional value? What are the microbiological characteristics? Statistical comparisons at the 10% <b>confidence</b> level for this purpose are at least risky. What is the viability of the process? <b>The article present</b> too many flaws.	Thank you for the compliments. The nutritional value of tortilla chips of minced catfish is the protein content. The protein content of 10% treatment increase become 9.98%. I did not research the microbiological characteristics on tortilla chips. I am sorry, I forgot to put the subheading of 'Decision Making (the calculation results on weight criteria)'. I already put it on the manuscript now, with the highlight in yellow colour.
<b>Minor</b> REVISION comments		
<b>Optional/General</b> comments
