<b>Minor</b> REVISION comments	Authors should use statistical analysis to analyse and compare their results	Thank you very much for your kind suggestion. According to the study design of this project, we tried to demonstrate our concept that role of platelet in patients who infected with vivax malaria. In this study, we used SPSS to analyse and prove our concept. Descriptive statistics were used for describe demographic data of the patients. We tried to use parametric statistic for data analysis, however, the data did not show normal distribution testing by Kolmogorov-Simrnov test. Therefore, Spearman's correlation and Chi-square test (non-parametric statistic) were applied to analyse the data.
