Compulsory REVISION comments		
Minor REVISION comments	<p>The Ms-50650 requires some minor revisions: the study reports data obtained with obsolete electrolyte quantification techniques. The use of selective electrodes will make the survey results more precise. The authors also declare the use of specific kits for the quantification of ALT, ALP, AST but do not indicate the lot and the origin and the producer, indicating then the colorimetric quantification referring to colorimetric methods obsolete publications. The authors summarily discuss the results without reaching incisive conclusions on the subject. There are many typos, the text must be double checked. The bibliography contains obsolete studies, must be integrated.</p>	
Optional/General comments
