

SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	Advances in Research
Manuscript Number:	Ms_AIR_32185
Title of the Manuscript:	Modelling and allocation of vegetable crops using Mathematical Programming
Type of Article:	Original Research Article

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
<p>My request was: The author/s must give justifications for their selection of the tolerance limits to be 6,5 in their study. They answered if another tolerance limits are chosen, the results may vary. In the final feedback file they reported that</p> <p>" If we solve the problem for example $Max\zeta_1$ subject to set of constraints, we get $Max\zeta_2$ the maximum value. Thus from this solution we can guess and take our tolerance more than that of obtained".</p> <p>They still guess the tolerance limits. Thus, the paper content is considered to be a mathematical problem not research work. Consequently, they should insert clear statement in the conclusion section, in the result section and in the abstract section to clear that the optimal allocation and the optimal maximized profit are affected by the tolerance limits for all goals. Moreover, the optimal allocation and the optimal maximized profit are dependent on the tolerance limits assumptions for all goals.</p>
