<p>Compulsory REVISION comments</p>	<p>This paper discusses the analytical hierarchy process (AHP) model for prioritizing the alternative strategies in malaria control. In this AHP model, five criteria and five alternatives, which are obtained from the experts, are defined for the goal to control malaria in Bauchi, Nigeria. The methodology used is well-discussed and the result obtained provides the best alternative strategy for malaria control. Overall, the content of the paper gives a contribution to the topic concerned. However, the presentation of the paper shall be further improved.
