PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	<ol style="list-style-type: none"> 1. Author has mentioned that all the parameters are within the WHO recommended value and concluded that it is suitable for drinking. However it would be better if the author had provided the recommended value for drinking. 2. Provide the image of the study area for the better understand. <p>I could not understand the regression equations of all parameters with distance to show the gradient effect of the location. For example in temperature, author mentioned that there is no gradient effect i.e no correlation exist between them. In my opinion, If there is no correlation or correlation between the two variables donot have the significant level 5-10% , we could not develop the regression equation. I would like to refer the paper https://doi.org/10.1155/2018/8369613 for</p>	
Minor REVISION comments	All are Ok but Check the grammatical mistake that have been highlighted by yellow colours in the manuscript
