PART 1: Review Comments

| | Reviewer's comment | Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here) |
|-------------------------------------|---|---|
| Compulsory REVISION comments | I find this manuscript of interest. It goes over the mechanisms that can generate swells and these can vary over time and places. In that sense, the manuscript is more a review paper rather than a research itself. Nothing wrong with that, but I think this fact should be reflected in the title; so, one recommendation is to change the title introducing the word "overview" or something similar. My other comment is that I am not sure if this is the right journal for this manuscript. It seems that the scope of this journal is deferent from the subject discuss in the paper. I think that the "Physical Science International Journal" is more appropriated for this paper. But that decision I leave it to the Editor. Regarding with the paper itself I recommend it for publication. | |
| Minor REVISION comments | In the manuscript I did some very minors changes (in red) as suggestion. I guess that for the final version, the editing of the equations will be improved. | |
