FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
<p>The authors did the analysed statistical but they did not give any indication each program and test they used. Furthermore, in table 1 there is probably an error. How can crude protein be an "a" and the ash "c"?</p> <p>The discussion remains poor, lack of data (concrete numbers obtained by other authors) and it was not discuss the nutritional composition. In addition, the article continues with a very detailed description of some methodologies (ex: protein) and little focus on results.</p> <p>In general, the article is more focused on methodology and little on results and discussion.</p>
