**PART 1: Review Comments**

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<b>Compulsory</b> REVISION comments	This paper needs a very strong revision, poorly written, and results seem to be a review of technics instead of the importance of them. Some references are not found for review, like the journal does not even exist in the internet and some are very old. Results do not agree with the importance of food poisoning because enterotoxins were not assessed and the sole existence of MRSA strains does not represent any harm in raw milk if they do not carry any enterotoxin. Please rewrite, check and actualize the references. And do PCR test for enterotoxin genes.	
<b>Minor</b> REVISION comments		
<b>Optional/General</b> comments		

**PART 2:**

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Are there ethical issues in this manuscript?	(If yes, Kindly please write down the ethical issues here in details) Not sure, important references were not found to be published on line
