

SDI Review Form 1.6

Journal Name:	Ophthalmology Research: An International Journal
Manuscript Number:	Ms_OR_49970
Title of the Manuscript:	Kinetics of Enhancer-monomer for Corneal Cross-linking: two-monomer system
Type of the Article	Original Research Article

General guideline for Peer Review process:

This journal's peer review policy states that <u>NO</u> manuscript should be rejected only on the basis of '<u>lack of Novelty'</u>, provided the manuscript is scientifically robust and technically sound. To know the complete guideline for Peer Review process, reviewers are requested to visit this link:

(http://www.sciencedomain.org/page.php?id=sdi-general-editorial-policy#Peer-Review-Guideline)

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed highlight that part in the manu his/her feedback here)
Compulsory REVISION comments		
Minor REVISION comments	 The article is dense and of great level and can be used by other researchers for the formulas it uses and develops. For the clinician has many formulas and perhaps the most interesting are the results, or a simple explanation of the results 1. Figure 1 is the most relevant of the work, it must be increased in size 2. Oxygen is being used in photorefractive intrastromal cross-linking (PiXL) and some animal studies support this. A summary of the bibliography on the possible use of oxygen in cross linking would be desirable, without formulas and easier for the clinician to understand. 	
Optional/General comments		

PART 2:

		Author's comment (if agreed wi that part in the manuscript. It is m feedback here)
Are there ethical issues in this manuscript?	(If yes, Kindly please write down the ethical issues here in details)	

Reviewer Details:

Name:	José Luis García Serrano
