PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	<p>Abstract part: Because "diabetes" and "malaria" are not related to bacterial infection at all, we do not support the use of this plant.</p> <p>Method part: The authors should state the origin of the bacteria used in the study. The authors should not decide MICs of this plant by a complex disc method, but decide MICs by liquid dilution method.</p> <p>Results and Discussion part: The results are inexperienced in comparison with past literature. Although this plant is known to have strong toxicity to humans (PMID 16078200)(PMID 17017523)(PMID 10440304), its contents are not described at all. The authors should provide evidence that this plant can be used for humans. Also, it is not necessary to show the contents of the same result in both the table and the figure.</p>
