

Editor's Comment:

As requested, I thoroughly reviewed the manuscript entitled "NEONATAL URINARY OUTFLOW OBSTRUCTION REQUIRING EARLY CIRCUMCISION" and also considered the statements of the reviewers. After that, my opinion is that this work is well written, concisely and objectively. Although the text deals with a relatively simple theme, and does not bring major scientific discoveries / novelties, it represents a good review of the subject. So my opinion is that it deserves to be considered for publication.

However, I recommend that the volume and edition numbers of reference number 1 be added (83 - Suppl. 1), and that a careful review of grammar and language style be done prior to publication
