SDI Review Form 1.6

PART 1: Review Comments

| | Reviewer's comment | Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here) |
|-------------------------------------|---|--|
| Compulsory REVISION comments | | |
| Minor REVISION comments | <p>This is a commendable work. However, I have some reservations that can further improve the quality of the work. Telecommunication Infrastructure and teledensity are quite related. The former drives the later. A direct positive relationship. There was no mention of data reflecting teledensity which would have deepened the paper.</p> <p>Since this paper is focused on OECD etc. There such should be data on android or smart phones. Over 60% of the impact is traceable to smart phones. All the advantages outlined in the paper, are as a result of android phones</p> <p>I must say that restrictions on ownership do not in any case, translate to operational inefficiencies. These are simply political matters and security concerns.</p> <p>What would happen to your regression results if you used 14 OECD and 14 nonOECD?</p> <p>Please align the hypothesis to the topic of the paper. You are not studying restrictions. Rather telecommunication infrastructure and investment. Therefore your H_0 <i>Telecommunication Infrastructure have no significant impact on economic growth</i></p> <p>JUST CURIOUS What results would you have if you applied ARDL Autoregressive distributed lag model</p> | |
| Optional/General comments | | |

PART 2:

| | Reviewer's comment | Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here) |
