

**SDI Review Form 1.6**

Journal Name:	<a href="#">Asian Journal of Research in Animal and Veterinary Sciences</a>
Manuscript Number:	Ms_AJRAVS_51287
Title of the Manuscript:	PERFORMANCE OF BROILERS STARTER FED DIETS CONTAINING VARYING CRUDE PROTEIN LEVELS
Type of the Article	

**General guideline for Peer Review process:**

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty**', provided the manuscript is scientifically robust and technically sound. To know the complete guideline for Peer Review process, reviewers are requested to visit this link:

(<http://www.sciencedomain.org/page.php?id=sdi-general-editorial-policy#Peer-Review-Guideline>)

**PART 1: Review Comments**

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<b>Compulsory</b> REVISION comments	<b>No</b>	
<b>Minor</b> REVISION comments	In title: indicate the place of study. <b>In</b> Experimental diets: Indicate which chemical composition table of ingredients and ration formulation software used. In experimental birds: Indicate whether the chicks were sexed or had an equitable distribution by treatment studied. In data collection: Indicate whether the chicks were sexed or had an equitable distribution by treatment studied. In discussion: It would be important to comment on how it would affect the economic remuneration of the rations for using starter diets with 27%, since peanut paste is not widely used in chicken feeding; Walddroup and Harms (Poultry Sci. 42: 652-657, 1963) when using peanut paste as the main protein source it is necessary to supplement with lysine, tryptophan methionine to improve weight gain; using diets with 18% peanut-based protein the limiting amino acids were lysine, methionine and threonine (Poultry Sci. 44: 1066-1071, 1965).	
<b>Optional/General</b> comments	The study in the conditions of Nigeria demonstrates the importance of the high protein content in start-up diets of broilers, using up to 27% of crude protein, observing improvements in final weight gain and feed efficiency without affecting mortality. I suggest that the manuscript be published once the comments of the reviewers are raised
